**Projects** 

### Musikahan Mobile App

August 2024

Coursework: 3nd-semester finals project

- Designed and implemented a mobile music application project in Mobile Application
  Development that has features like user authentication, search, and streaming of music.
- Created using **React Native**, and **TypeScript** to deliver an engaging music experience.
- Integrated **Firebase** for real-time database management, user authentication, and cloud storage.
- Utilized **Android Studio** for testing and deployment on Android devices.
- Collaborated with team members using **GitHub** for version control and project management.

### **Equipment Rentals System Management**

April 2024

Coursework: 2nd-semester finals project

- Built a project in Object-Oriented Programming and Software Analysis & Design focused on database management.
- Created a **C#** .**NET MAUI Blazor Hybrid App** for adding, viewing, and deleting equipment and customer records.
- Used HeidiSQL (MariaDB) for efficient database management, and CSS/HTML for styling and layout customization.

### YYC Scan (YYC Hacks 2024, 1st Place)

Feb 2024

- Engineered a full-stack web application to help tourists and newcomers navigate what to do right after entering Calgary through QR codes/scans.
- Used: Python, Flutter, C#, HTML/CSS, JavaScript
- Visualized GitHub data to show collaboration.
- Utilized publicly accessible datasets and databases sourced from both the city of Calgary and the province of Alberta to devise comprehensive solutions to the issue at hand.
- Implemented the web app's AI chatbot using **OpenAI** and **JSON**.

### Tedi Community App (SAIT Hackathon 2023, 1st Place)

Dec 2023

- Developed a web application for students that has SAIT's available services.
- Used: **Python**, **Flutter**, **HTML/CSS**
- Designed the web app's user interface and visual concepts using **Figma**.
- Collaborated with students on different programs to survey to base our web application goals.
